Description

This is a Yimatzu brand EV1270 Sealed Lead Acid (SLA), Maintenance Free (MF), AGM class, GEL electrolyte, 12V, 7Ah battery. This is the highest grade of EV battery produced by Yimatzu and continues to rank as the top performing EV battery in the North American marketplace.

Yimatzu AGM (Absorbent Glass Mat) technology introduces the advantage of suspending the electrolyte within an internal glass mat structure. This significantly reduces risk of vapour leak and provides substantiall y higher power capacity, increasing both total life span as well as the range of each individual cycle.

Yimatzu AGM series batteries provide a virtually maintenance free and risk free power solution by self-con taining the acidic electrolyte. This is crucial for vehicles where impacts can occur, such as powersports, mobility and watersports. Yimatzu AGM battery design will maintain its performance and long-term storage characteristics for several times longer than a conventional lead battery.

Yimatzu GEL electrolyte technology provides a safer battery with higher performing deep cycle characterist ics; greater cycle length and battery life-span. Yimatzu GEL impact and vibration dampening properties inc rease battery durability while providing superior resistance to temperature fluctuations and extremes. Yim tazu GEL ensures uniform electrolyte suspension, even plate discharge profiles, higher material heat capac ity and top rated leak proofing from both evaporation and battery impact.

It is the combination of these two technology types along with industry leading manufacturing systems whic h allow Yimatzu to produce an unrivaled EV battery and deliver them worldwide at a lower cost to the consu mer. A finished product which provides the high power capacity and unmatched life expectancy of the Yimatz u AGM series, along with the improved deep cycle performance, stabilized discharge profile, advanced leak proofing and extended battery life of Yimatzu GEL electrolyte technology.

Note that a Yimatzu AGM battery with GEL electrolyte is different and far superior in almost every applica tion than a GEL cell battery. GEL cell batteries are typically more expensive with less forgiving recharge protocols and do not offer the same power capacity as their size-comparable AGM counterparts. GEL cell ba tteries occupy a very small percentage of the total market and should only be used when specifically direc ted by the manufacturer; typically when low power is required at a slow discharge rate.

This EV1270 battery type is very common within the powersport, transportation, toy, and universal power ba ckup/power supply industries. Also often used for electric scooters/mopeds, mobility scooters/electric whe elchairs, as well as a wide assortment of electric ATVs, dirt bikes and other powersports, mobility or toy products, such as the popular RAZOR electric scooters models E200, ES300, E300, and many others.

Approximate Dimensions:

Length: 6.5cm

Width: 15cm

Height: 9.5cm
