#### Description

This fuel shutoff valve / petcock is commonly (but not exclusively) used for 250cc engine models such as the Jianshe JS250ATV. It bolts to the under-body of the the gas / fuel tank and serves to manually disable the flow of fuel to the carburetor. Long stem filtration tube. Used primarily for 5mm to 7mm fuel line applications for any displacement, most commonly used (but not limited to) 250cc ATVs such as the Jianshe JS250, Dirt Bikes, gas powered Scooter, Go-Karts and many other machines. Great addition for those machines that never came with a shutoff. A necessary part for those who want to have easy maintenance access to the carburetor. Valve length is 7.5cm and the mounting holes are 2.6cm apart centre to centre.
